Mining Industry Hybrid 4WD – Extended 1 Day Duration

This combination program is an amalgam of the core elements of our on and off-road programs. For operators who don't have the luxury of time and are looking to get the fundamentals in place, the Hybrid offers a made road driving experience that will cover emergency braking and illustrate the benefits of 4WD usage on dirt. For those times when you might have to get off the beaten track you'll also have the essentials for the trail with an understanding of the importance of tyre pressure reduction, 4WD range selection and basic vehicle recovery.

With an earlier start and later finish we'll include the essential theory session at day's start to get your understanding of the vehicle and your obligations in the field exactly right. From there it's all practical skills development from mid-morning to day's end with plenty of time behind the wheel.

Ideally this program is suited to crew working on projects after the exploration team has been through, tracks have been largely established and some site risks have been removed. Courses are on demand and can be tailored to suit your requirements. You'll be assessed on two levels, via your practical skills demonstrated on the day and a post-course theory assessment.

The program is fully transportable. Ask us about how we can assist you at your site, anywhere in Australia and internationally too.

- **Learn all about the featured safety technologies of your vehicle – ABS/ETC/VSC (where fitted)**
- **Learn about the 4WD technologies seen on your vehicle – 4WD HIGH/LOW, LSD, ETC, Diff-Lock**
