Commonwealth ATV 4WD – 1 Day Duration

There's rarely a week that goes by where there's not a report of an incident involving an ATV. Anyone engaged in projects requiring ATV usage will benefit from this highly informative and practical rider-training program. ATVs can be inherently unstable and plenty of operators have come to grief with the most common incident a rollover, so our program examines this and other dangers and how to avoid them.

The day commences with a brief theory session that can incorporate Power Point combined with a vehicle familiarisation and preparation workshop. With fluids checked, tyres inflated correctly and controls understood, riders then proceed to the loading and unloading phase of their program, another high-risk activity. Later at our training grounds you'll be set numerous tasks on a range of terrains that can be on flat or undulating terrain that highlight the maximum capability of machine and rider, all underpinned with a heavy safety emphasis. Expect gradients and loose surfaces. You'll learn the art of shifting your body mass to correct rollover threats, as well as 4WD and diff-lock usage.

Appropriate apparel is an imperative, without helmet, jacket, boots and gloves you shouldn't be anywhere near one of these vehicles, so we'll analyse what PPE you'll require and on the day of your training can supply not only a late-model Yamaha 4WD ATV, but also suitable attire for an additional expense.

Assessment is based around your demonstrated practical skills whilst riding the bike. Don't worry if you haven't ridden one before. If you can successfully drive a car you shouldn't have too much trouble. The program is fully transportable. Ask us about how we can assist you at your site (minimum numbers may apply).

- **Learn all about the features on your ATV or UTV – 4WD HIGH/LOW, diff-lock (where fitted)**
- **Develop a checklist of RISKS to avoid whilst riding**
- **Maintain vehicle in accordance with your pre-start and post-ride requirements**
